## Post-doctoral position in Human Immunology

A post-doctoral research position, that is part of research collaboration with F. Hoffmann-La Roche, is available immediately in the team of Dr. Salvatore Valitutti at the Cancer Research Center (CRCT) of Toulouse, France.

The ideal candidate for this position has background in immunology and is interested in studies related to the immune mechanisms and their regulation at the immunological synapses. Experience with human immunology is desirable as well as excellent capabilities with primary cell culture and/or strong expertise in imaging techniques.

The specific aim of the project is to define strategies to potentiate immune checkpoint function at the immunological synapses formed by human T lymphocytes with antigen presenting cells with the purpose of controlling T cell activation.

The CRCT is a newly built INSERM, CNRS, Toulouse University research center specialized in research in oncology, hematology and immunology. The center is located in a modern biotechnology campus and is adjacent to the Clinical Cancer Center of Toulouse (IUCT Oncopole) allowing CRCT scientists to work in close cooperation with clinicians. The CRCT hosts 21 highly successful research teams and eight core facilities grouped within a Technology Center (website: <https://www.crct-inserm.fr/>).

The applicant should have a PhD in immunology or cell biology and a solid publication record.

Please send CV and a short covering letter, including the name of three references and their e-mail, to: [salvatore.valitutti@inserm.fr](mailto:salvatore.valitutti@inserm.fr)
